Undergraduate Majors

BUSINESS TECHNOLOGY (BTEC)
Business Technology students concentrate on the development and use of digital technologies to solve business problems. Students develop an understanding of the managerial issues encountered in the operation of technologies in organizations. Graduates often go into careers in consulting, technology startups, technology implementation, process improvement, business transformation and cybersecurity.

BUSINESS ANALYTICS (BAN)
The Business Analytics major is oriented toward statistical methods and data analysis, focusing on topics such as predictive analytics and data visualization with a strong emphasis on statistics and mathematical methods. Students learn how to discover patterns, make predictions, tell stories and derive meaning from complex data sets. Career interests tend to include consulting, data science, business analysis, sports analytics and machine learning.

As an IT, Analytics, & Operations student, you’ll be immersed in a curriculum that will prepare you to address the global challenges of a data-saturated — and technology-dependent — world from a uniquely Notre Dame perspective that centers on human flourishing.

Through engaging coursework, experiential learning opportunities and outside-the-classroom activities, ITAO prepares students for lifetime careers in tech and analytics by equipping them with the skills to generate value from next-generation digital technologies.
Mendoza’s business technology major “understands that the computers are there to serve the people, and the people are there to serve the world.”
— USA Today
